

May 20-26 - Week 1
Review & CS 393
West Virginia University at Parkersburg
Co-Operative Education

Week 10 - July 22-28

Tasks:

Rewrite build script for managed repository
Port comprehensive control scripts from sister project - BASH scripts to start/stop individual applications, infrastructure setup, clean up, run unit and regression tests.
More architecture meetings, specifically data structures and top level issues.
Bug triage before code deadline - reproduce issues and assign to appropriate teams with logging.

Technical Summary:

This week I spent a lot of time pulling apart and re-writing control scripts for the project's applications and infrastructure. I had to set up the dependencies, integrate with the build script's output, and add in specifics for setting up the environment for each application.

- Bash shell
- Bug Tracking System
- Ant Scripting
