Week 15 - December 2 - 8

Tasks:

Investigate alerts for servers

Security Training

Huge Refactor

Technical Summary:

This week I had to investigate some alerts that had triggered over the weekend for our servers - some actions were taking too long.

I had to take a security class.

I spent 3 days doing a huge refactoring of our common code - ripping out a bunch of very old data structures and replacing them with type-safe enums and clear breaks of responsibility

-Java

-Proprietary alerts system.
