

CS 393
West Virginia University at Parkersburg
Co-Operative Education

September 2 - 8 - Week 3

Tasks:

Review and verify outstanding bugs
Build system & configuration changes
Debug load test results & modify harness
Integration testing for new application versions

Technical Summaries:

I spent a good part of this week resolving and verifying some accumulated bugs that I had filed and that had been fixed.

I worked on rewriting some build scripts and configuration changes.

Our performance team had issues with their load test harness for one of our services, and I spent a day debugging it and working with them to modify their tests.

- Confluence/Wiki formatting and documentation
- Java
- Bug Tracking (proprietary system)
- Apache Ant
- ProxySniffer
