August 26 - September 1— Week 2

Tasks:
Complete DR review, update of documentation
Configuration of data cluster for storage.

Technical Summary:
This week I spent a little time finishing a DR review, and documented the changes in our procedures that were necessary, and updated our wiki with expected results in different cases.
I spent most of the week working on kicking and configuring a set of machines for a data cluster, and debugging networking and connection issues for a set of application machines to talk to them.

- Bug Tracking (Proprietary System)
- Data configuration
- Networking tools (Charles Proxy, telnet, curl)
