Co-Operative Education

May 27-June 2 - Week 2

Tasks:
Systems cleanup and archiving
Physical movement of systems (3 days)

Technical Summary:
This week I was physically moving between two different workplaces, so I was
responsible for cleaning out old systems - removing proprietary source code from old
systems and securely erasing them, consolidating applications and server code onto
two machines, and ensuring that those machines were completely backed up in case of
damage during the move. I was also responsible for physically tearing down and
packing, and unpacking and setting up these systems.

- Shell scripts for moving items around
- Configuration of backups
- Source Control System (Subversion)
